

Promix Microcell Technology | Foam System

Microcell foam extrusion systems for any extrusion line.

Promix Microcell Technology | Features

20% Raw Material Savings | lower production cost & lower carbon footprint

- >350 Microcell Foam Systems globally in operation
- Retro-fitting for any extrusion line
- Patented Promix technology yielding smallest and most homogeneous microcellular foam
- Easy switching between foamed & compact production
- Turn-key solution including start-up support
- Maximum density & weight reduction, maintaining highest mechanical properties
- Very even micro-cell structures
- Stable process & product quality over time

Promix Microcell Technology | **Foaming Applications**

Sheets & Thermoforming

Pipes & Tubes & Ducts

Profiles

Boards

Wire & Cable

Extrusion Blow Molding

Cast Films

Fibers

Promix Microcell Technology | **Benefits**

Microcell foam extrusion makes the difference

General	- Material cost savings - CO₂ footprint reduction & fully recyclable - Differentiation from competition via innovative technology
Application specific	- Weight reduction - Shock absorption & impact damping - Thermal insulation - Noise cancellation - Light diffusion optics & visual effects

Microcell foam project flow – Quick & lean start-up

Installation	Lean, retrofittable system for any extrusion line
Process support	Promix experts to engage with process optimization
Start-up support	Promix to train your team

Microcell Foam System | Promix equipment (red shapes) in the extrusion processes.
